**Slooh to Broadcast the Harvest Moon
Live from Arizona**

Slooh will broadcast a free, real-time feed of the most famous full Moon of the year, the Harvest Moon. Viewers can capture a first look of the Harvest Moon on Slooh.com, Wednesday, September 18th starting at 7 PM PDT / 10 PM EDT / 02:00 UTC (9/19) - viewers can watch live on their computer or mobile device.

Slooh will be broadcasting in 720p high-definition, live from their partner facility in Prescott, Arizona while the Moon is rising. Observatory owner Matt Francis will be using special imaging techniques to provide fantastic zoomed in views of the lunar surface. A Slooh broadcast team comprised of Paul Cox, Bob Berman, and Matt Francis will provide commentary as the event unfolds.

"The Harvest Moon is the most famous full moon of the year, by far. Yet it's bathed in widespread myth and misconception. During our live show, we intend to combine science, lore, and mythology to provide an accurate picture of this annual lunar event.," says Slooh broadcast team member Bob Berman.

About Slooh

Slooh is the leader in live, celestial event programming with weekly shows featuring the great wonders of the Universe - shown live by observatories worldwide. SLOOH is powered by its members—men, women and children in 80 countries who have taken .8 million photos of 46,000 unique objects and events in the night sky since our launch on Christmas Day, 2003. Slooh's patented instant imaging technology makes astronomical objects appear in true color and in real time over a 5 to 10 minute time frame.

Protected by U.S. Patent Number 7,194,146 B
